查尔斯滤色镜 Chelsea (Jadeite) Filter

查尔斯第四代滤色镜是鉴别宝石颜色的一个基础工具，最初的用途是快速鉴别祖母绿、人造宝石，其也是辨别其他颜色宝石的一个重要工具。滤色镜设计成只能供深红色和黄绿色的光透过，而最好的成效是当宝石在强光照射下检验的时候得到结果。同时为了便于收藏者们细微观察翡翠、宝石的内部结构柳裂及雕刻工艺的好坏，配备了一组高分辨率的15倍广角光学珠宝放大镜。

Chelsea (Jadeite) Filter,An essential device in identifying colored stones. While it was originally intended to rapidly differentiate between genuine Emeralds and the pastes and doublets which resemble them, it also is a valuable aid in identifying other colored stones, as well. Designed to transmit only deep red and yellow-green light, and the best results are obtained when stones are examined under a strong electric light.
